

Argentina - Buenos Aires

Julián Moreyra

Developer Full Stack MERN

ABOUT ME

I program front end and back end web applications. Using the MERN Stack (MongoDB, Express, React, NodeJS). I did Ecommerce projects with payment methods. Make various APIs with nodeJS / Django. I also do Web Scraping with Selenium and Scrapy with SQL persistence.

I solve problems in a self-taught way. I like challenges and learning new technologies. My goal on a personal level is to be able to continue growing and developing professionally in the IT world. I consider myself a profile with initiative, organizational capacity, autonomy and adaptation to teamwork.
